

Bakwowi Bryan Beteck

Computer Science Student | Software Engineering & AI Test Automation

Regensburg, Germany | bryanbakwowi@gmail.com | +49 179 9483998
[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary

International Computer Science student with professional experience in AI-assisted test-case implementation, software development, and IT infrastructure. Builds production-style applications with Python, Java, TypeScript, React, Spring Boot, OpenAI APIs, Docker, AWS, and Cloudflare. Combines a quality-focused testing mindset with practical full-stack delivery, clear documentation, and structured problem solving.

Professional Experience

Software Developer – Student Assistant

Jan 2024 – Jan 2025

Students Tutor Web Application Project

OTH Regensburg, Germany

- Implemented and validated four AI-assisted test cases for Tutor, a web application, using an OpenAI model to translate requirements and expected behavior into structured scenarios.
- Identified two software defects and achieved 80% coverage of the defined test scope by reviewing AI-generated cases for correctness, edge conditions, and reproducibility.
- Documented test steps, expected results, and defect findings and supported debugging and iterative software-quality improvements using Python, Java, Git, and SQL.

IT Infrastructure Engineer

Nov 2022 – Dec 2023

MTN Cameroon

Cameroon

- Supported day-to-day IT infrastructure operations in a telecommunications environment, including incident triage, system and network troubleshooting, and service restoration.
- Documented configurations and operational issues, coordinated escalations, and worked with technical stakeholders to keep user and business services reliable.

Education

B.Sc. International Computer Science

Oct 2023 – Present

OTH Regensburg

Regensburg, Germany

- Relevant coursework: Software Engineering, Databases, Operating Systems, Statistics, Programming, Internet of Things Security.

Technical Skills

- **Programming:** Python, Java, C, TypeScript, JavaScript, SQL, object-oriented programming, data structures, algorithms
- **AI, testing, and data:** AI-assisted test design, test-case implementation, RAG, OpenAI Responses API, embeddings, BM25, vector search, retrieval evaluation, data analysis
- **Backend and frontend:** Spring Boot, REST APIs, React, Next.js, Vite, Tailwind CSS, MariaDB, Supabase, Drizzle ORM
- **Cloud and DevOps:** AWS EC2, Cloudflare Workers, D1, R2, Docker, Docker Compose, GitHub Actions, CI/CD, Linux, Nginx, HTTPS, Vercel
- **Quality and delivery:** Git, Maven, Vitest, ESLint, debugging, automated testing, API design, technical documentation

Selected Projects

VeriRAG – Auditable Technical-Document Assistant

2026 – Present

Private project; in active development

- Built a production-style RAG application with React, TypeScript, OpenAI Responses, hybrid BM25/vector retrieval, Cloudflare Workers, D1, and R2; every answer exposes citations, retrieval scores, latency, and supporting passages.
- Implemented confidence-based refusal, local deterministic fallback, prompt-injection defenses, and an evaluation suite; the included five-case technical corpus achieves 1.00 Recall@5 and 1.00 MRR.

Full-Stack Microblogging Platform

[GitHub](#)

React, Java 21, Spring Boot, MariaDB, Docker, AWS

- Designed a REST-based application for posts, comments, likes, and profiles, separating the React frontend, Spring Boot business logic, and MariaDB persistence layer.
- Automated Maven build and test, Docker image publication, and AWS EC2 deployment with GitHub Actions; configured Nginx reverse proxying and Let's Encrypt HTTPS.

E-Commerce Web Application

[GitHub](#)

React, TypeScript, Vite, Tailwind CSS, Supabase

- Developed a responsive storefront with reusable components, authentication, product and inventory data, and an administrative interface backed by Supabase services.
- Applied TypeScript, modular UI design, responsive layouts, ESLint, and Git-based development to keep the codebase maintainable.

Developer Portfolio

[GitHub](#)

React 18, TypeScript, Tailwind CSS, TanStack Query, Vercel

- Engineered a responsive, single-page portfolio with reusable data-driven project and skill components, mobile navigation, routing, animations, and accessible interaction states.
- Established a consistent Tailwind design system and deployed the optimized application on Vercel.

Banking System

[GitHub](#)

C, file persistence, procedural programming

- Implemented persistent account creation, deposits, withdrawals, transfers, editing, deletion, search, and balance sorting using C file operations and structured data handling.

Selected Certifications

- [AI Engineer for Data Scientists Associate](#) – DataCamp
- [Google Cloud Engineering Certificate](#) – Google Cloud
- [Advanced Testing Practices Using DevOps Tools](#) – AWS
- [Developing AI Systems with OpenAI](#) – DataCamp
- [Data Analytics in Python](#) – DataCamp

Soft Skills

- **Quality mindset and ownership:** Analytical, structured, and independent approach to test design, debugging, architecture, and end-to-end delivery
- **Communication and collaboration:** Clear technical documentation, reliable stakeholder coordination, constructive teamwork, and rapid learning

Languages

English: C2 (fluent) | **German:** B2 (professional working proficiency) | **French:** C2 (fluent)
